General site safety
During the course of construction, alteration, or repairs, keep form and scrap lumber with protruding nails and all other debris clear from work areas, passageways, and stairs, in and around buildings or other structures.

Remove combustible scrap and debris at regular intervals during the course of construction. Provide safe means to facilitate such removal.

Rebar cap protection
Guard all protruding reinforcing steel onto and into which employees could fall to eliminate the hazard of impalement.

Electrical cords
Check your cords every day to make sure they are in good shape.

Oxygen cylinders
Separate oxygen cylinders in storage from fuel-gas cylinders or combustible materials (especially oil or grease), a minimum distance of 20 feet (6.1m) or by a noncombustible barrier at least 5 feet (1.5m) high having a fire-resistance rating of at least one half hour.

All contractors should clean up their debris, trash, and waste by the end of each day.
Additional Information for Presenters
Review the information provided on the reverse side of this safety tip sheet. Please refrain from reading the information verbatim—paraphrase it instead.

OSHA Standards That May Apply:
1926.701(b)  Rebar caps
1926.350(a)(10)  Oxygen cylinders
1926.400  Electrical cords
